

FLORIDA

In Fiscal Year 2012,¹ the state of Florida received:

- **Teen Pregnancy Prevention Initiative funds totaling \$3,565,351**
- **Title V State Abstinence Education Program funds totaling \$2,829,101**

In Fiscal Year 2012, local entities in Florida received:

- **Teen Pregnancy Prevention Initiative funds totaling \$4,766,323**
- **Competitive Personal Responsibility Education Program funds totaling \$4,822,508**
- **Competitive Abstinence Education Grant Program funds totaling \$649,342**

SEXUALITY EDUCATION LAW AND POLICY

Florida Statute 1003.42 states that public schools must teach comprehensive health education that includes giving students “an awareness of the benefits of sexual abstinence as the expected standard and the consequences of teenage pregnancy.”² Previous Florida law required students to complete 0.5 credits in Life Management Skills in order to graduate high school. These courses were required to include instruction on the prevention of HIV/AIDS and sexually transmitted diseases (STDs), family life, the benefits of sexual abstinence, and the consequences of teen pregnancy.

Effective for the 2007–2008 school year, students entering high school were no longer required to receive health education as a graduation requirement. School districts now have the option of requiring students to take 0.5 credits in physical education and 0.5 credits in personal fitness, or to complete a one-credit course, Health Opportunities through Physical Education (HOPE), which integrates personal fitness and life management skills. The course includes fitness and health concepts as well as instruction on disease prevention, including HIV/AIDS and other STDs. State policy still reads that “course descriptions for comprehensive health education shall not interfere with the local determination of appropriate curriculum which reflects local values and concerns.”³

School boards may decide to allow additional instruction regarding HIV/AIDS. Such instruction may include information about “means used to control the spread of acquired immune deficiency syndrome.”⁴

All instruction and course material must:⁵

- teach abstinence from sexual activity outside of marriage as the expected standard for all school-age students, while teaching the benefits of monogamous heterosexual marriage;
- emphasize that abstinence from sexual activity is a certain way to avoid out-of-wedlock pregnancy, STDs (including acquired immune deficiency syndrome (AIDS)), and other associated health problems;
- teach that each student has the power to control personal behavior and encourage students to base actions on reasoning, self-esteem, and respect for others; and
- provide instruction and material that is appropriate for the grade and age of the student.

FLORIDA

Florida standards, titled *Sunshine State Standards for Health and Physical Fitness*, do not mention instruction in HIV/AIDS, STDs, or sexuality education.

As with the previously required course, parents may submit a written request to the school principal to exempt their child from HIV/AIDS instruction within HOPE or any other sexuality education and/or STD/HIV education classes. This is referred to as an “opt-out” policy.

See Florida Statute, Title XLVIII, Chapter 1003, Section 42, 43, and 46.

RECENT LEGISLATION

SIECUS is not aware of any recent legislation regarding sexuality education in Florida.

YOUTH SEXUAL HEALTH DATA

SIECUS has compiled the following data to provide an overview of adolescent sexual health in Florida. The data collected represents the most current information available.

Florida Youth Risk Behavior Survey (YRBS) Data⁶

- In 2011, 44% of female high school students and 52% of male high school students in Florida reported ever having had sexual intercourse, compared to 46% of female high school students and 49% of male high school students nationwide.
- In 2011, 3% of female high school students and 12% of male high school students in Florida reported having had sexual intercourse before age 13, compared to 3% of female high school students and 9% of male high school students nationwide.
- In 2011, 11% of female high school students and 21% of male high school students in Florida reported having had four or more lifetime sexual partners, compared to 13% of female high school students and 18% of male high school students nationwide.
- In 2011, 32% of female high school students and 36% of male high school students in Florida reported being currently sexually active (defined as having had sexual intercourse in the three months prior to the survey), compared to 34% of female high school students and 33% of male high school students nationwide.
- In 2011, among those high school students who reported being currently sexually active, 58% of females and 70% of males in Florida reported having used condoms the last time they had sexual intercourse, compared to 54% of females and 67% of males nationwide.
- In 2011, among those high-school students who reported being currently sexually active, 19% of females and 10% of males in Florida reported having used birth control pills the last time they had sexual intercourse, compared to 23% of females and 13% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 20% of females and 27% of males in Florida reported having used alcohol or drugs the last time they had sexual intercourse, compared to 18% of females and 26% of males nationwide.

FLORIDA

- In 2011, 84% of high school students in Florida reported having been taught about AIDS/HIV in school, compared to 84% of high school students nationwide.

Broward County, Florida

- In 2011, 42% of female high school students and 56% of male high school students in Broward County reported ever having had sexual intercourse, compared to 46% of female high school students and 49% of male high school students nationwide.
- In 2011, 5% of female high school students and 12% of male high school students in Broward County reported having had sexual intercourse before age 13, compared to 3% of female high school students and 9% of male high school students nationwide.
- In 2011, 10% of female high school students and 23% of male high school students in Broward County reported having had four or more lifetime sexual partners, compared to 13% of female high school students and 18% of male high school students nationwide.
- In 2011, 30% of female high school students and 37% of male high school students in Broward County reported being currently sexually active (defined as having had sexual intercourse in the three months prior to the survey), compared to 34% of female high school students and 33% of male high school students nationwide.
- In 2011, among those high school students who reported being currently sexually active, 66% of females and 76% of males in Broward County reported having used condoms the last time they had sexual intercourse, compared to 54% of females and 67% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 8% of females and 8% of males in Broward County reported having used birth control pills the last time they had sexual intercourse, compared to 23% of females and 13% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 19% of females and 26% of males in Broward County reported having used alcohol or drugs the last time they had sexual intercourse, compared to 18% of females and 26% of males nationwide.
- In 2011, 87% of high school students in Broward County reported having been taught about AIDS/HIV in school, compared to 84% of high school students nationwide.

Duval County, Florida

- In 2011, 47% of female high school students and 55% of male high school students in Duval County reported ever having had sexual intercourse, compared to 46% of female high-school students and 49% of male high school students nationwide.
- In 2011, 5% of female high school students and 16% of male high school students in Duval County reported having had sexual intercourse before age 13, compared to 3% of female high school students and 9% of male high school students nationwide.

FLORIDA

- In 2011, 12% of female high school students and 27% of male high school students in Duval County reported having had four or more lifetime sexual partners, compared to 13% of female high school students and 18% of male high school students nationwide.
- In 2011, 35% of female high school students and 39% of male high school students in Duval County reported being currently sexually active (defined as having had sexual intercourse in the three months prior to the survey), compared to 34% of female high school students and 33% of male high school students nationwide.
- In 2011, among those high school students who reported being currently sexually active, 53% of females and 65% of males in Duval County reported having used condoms the last time they had sexual intercourse, compared to 54% of females and 67% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 15% of females and 12% of males in Duval County reported having used birth control pills the last time they had sexual intercourse, compared to 23% of females and 13% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 19% of females and 28% of males in Duval County reported having used alcohol or drugs the last time they had sexual intercourse, compared to 18% of females and 26% of males nationwide.
- In 2011, 81% of high school students in Duval County, Florida, reported having been taught about AIDS/HIV in school, compared to 84% of high school students nationwide.

Miami-Dade County, Florida

- In 2010, 43% of female high school students and 52% of male high school students in Miami-Dade County reported ever having had sexual intercourse, compared to 46% of female high school students and 49% of male high school students nationwide.
- In 2011, 3% of female high school students and 13% of male high school students in Miami-Dade County reported having had sexual intercourse before age 13, compared to 3% of female high school students and 9% of male high-school students nationwide.
- In 2011, 9% of female high school students and 24% of male high school students in Miami-Dade County reported having had four or more lifetime sexual partners, compared to 13% of female high school students and 18% of male high school students nationwide.
- In 2010, 30% of female high school students and 36% of male high school students in Miami-Dade County reported being currently sexually active (defined as having had sexual intercourse in the three months prior to the survey), compared to 34% of female high school students and 33% of male high school students nationwide.
- In 2011, among those high school students who reported being currently sexually active, 61% of females and 76% of males in Miami-Dade County reported having used condoms the last time they had sexual intercourse, compared to 54% of females and 67% of males nationwide.

FLORIDA

- In 2011, among those high school students who reported being currently sexually active, 8% of females and 4% of males in Miami-Dade County reported having used birth control pills the last time they had sexual intercourse, compared to 23% of females and 13% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 16% of females and 30% of males in Miami-Dade County reported having used alcohol or drugs the last time they had sexual intercourse, compared to 18% of females and 26% of males nationwide.
- In 2011, 78% of high school students in Miami-Dade County reported having been taught about AIDS/HIV in school, compared to 84% of high school students nationwide.

Orange County, Florida

- In 2011, 38% of female high school students and 45% of male high school students in Orange County reported ever having had sexual intercourse compared to 46% of female high school students and 49% of male high school students nationwide.
- In 2011, 4% of female high school students and 11% of male high school students in Orange County reported having had sexual intercourse before age 13, compared to 3% of female high school students and 9% of male high school students nationwide.
- In 2011, 12% of female high school students and 17% of male high school students in Orange County reported having had four or more lifetime sexual partners, compared to 13% of female high school students and 18% of male high school students nationwide.
- In 2011, 29% of female high school students and 30% of male high-school students in Orange County reported being currently sexually active (defined as having had sexual intercourse in the three months prior to the survey), compared to 34% of female high-school students and 33% of male high-school students nationwide.
- In 2011, among those high school students who reported being currently sexually active, 60% of females and 73% of males in Orange County reported having used condoms the last time they had sexual intercourse, compared to 54% of females and 67% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 13% of females and 14% of males in Orange County reported having used birth control pills the last time they had sexual intercourse, compared to 23% of females and 13% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 24% of females and 27% of males in Orange County reported having used alcohol or drugs the last time they had sexual intercourse, compared to 18% of females and 26% of males nationwide.
- In 2011, 87% of high school students in Orange County reported having been taught about AIDS/HIV in school, compared to 84% of high school students nationwide.

FLORIDA

Palm Beach County, Florida

- In 2011, 46% of female high school students and 51% of male high school students in Palm Beach County reported ever having had sexual intercourse, compared to 46% of female high school students and 49% of male high school students nationwide.
- In 2011, 4% of female high school students and 13% of male high school students in Palm Beach County reported having had sexual intercourse before age 13, compared to 3% of female high school students and 9% of male high school students nationwide.
- In 2011, 12% of female high school students and 22% of male high school students in Palm Beach County reported having had four or more lifetime sexual partners, compared to 13% of female high school students and 18% of male high school students nationwide.
- In 2011, 36% of female high school students and 35% of male high school students in Palm Beach County reported being currently sexually active (defined as having had sexual intercourse in the three months prior to the survey), compared to 34% of female high school students and 33% of male high school students nationwide.
- In 2011, among those high school students who reported being currently sexually active, 60% of females and 64% of males in Palm Beach County reported having used condoms the last time they had sexual intercourse, compared to 54% of females and 67% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 24% of females and 19% of males in Palm Beach County reported having used birth control pills the last time they had sexual intercourse compared to 23% of females and 13% of males nationwide.
- In 2011, among those high school students who reported being currently sexually active, 23% of females and 31% of males in Palm Beach County reported having used alcohol or drugs the last time they had sexual intercourse, compared to 18% of females and 26% of males nationwide.
- In 2011, 85% of high school students in Palm Beach County reported having been taught about AIDS/HIV in school compared to 84% of high school students nationwide.

Florida Teen Pregnancy, HIV/AIDS, and Other STD Data

Teen Pregnancy, Birth, and Abortion

- In 2008, Florida's teen pregnancy rate ranked 15th in the United States, with a rate of 73 pregnancies per 1,000 young women ages 15–19, compared to the national rate of 68 pregnancies per 1,000.⁷ There were a total of 43,740 pregnancies among young women ages 15–19 reported in Florida in 2008.⁸
- In 2011, Florida's teen birth rate ranked 25th in the United States, with a rate of 29.5 births per 1,000 young women ages 15–19, compared to the national rate of 31.3 births per 1,000.⁹ In 2011, there were a total of 17,120 live births to young women ages 15–19 reported in Florida.¹⁰
- In 2008, Florida's teen abortion rate ranked eighth in the United States, with a rate of 22 abortions per 1,000 young women ages 15–19, compared to the national rate of 18 abortions per 1,000.¹¹

FLORIDA

HIV and AIDS

- In 2011, the rate of diagnoses of HIV infection among adolescents ages 13–19 in Florida was 13.5 per 100,000, compared to the national rate of 7.6 per 100,000.¹²
- In 2011, the rate of AIDS diagnoses among adolescents ages 13–19 in Florida was 3.3 per 100,000, compared to the national rate of 1.9 per 100,000.¹³
- In 2011, the rate of diagnoses of HIV infection among young adults ages 20–24 in Florida was 55.3 per 100,000, compared to the national rate of 36.3 per 100,000.¹⁴
- In 2011, the rate of AIDS diagnoses among young adults aged 20–24 years in Florida was 17.9 per 100,000, compared to the national rate of 10.9 per 100,000.¹⁵

Sexually Transmitted Diseases

- In 2011, Florida ranked 24th in the United States for reported cases of chlamydia among young people ages 15–19, with an infection rate of 1,945.5 cases per 100,000, compared to the national rate of 2,082.7 cases per 100,000. In 2011, there were a total of 23,898 cases of chlamydia among young people ages 15–19 reported in Florida.¹⁶
- In 2011, Florida ranked 18th in the United States for reported cases of gonorrhea among young people ages 15–19, with an infection rate of 410.5 cases per 100,000, compared to the national rate of 399.9 cases per 100,000. In 2011, there were a total of 5,042 cases of gonorrhea among young people ages 15–19 reported in Florida.¹⁷
- In 2011, Florida ranked 11th in the United States for reported cases of primary and secondary syphilis among young people ages 15–19, with an infection rate of 5.2 cases per 100,000, compared to the national rate of 3.9 cases per 100,000. In 2011, there were a total of 64 cases of syphilis among young people ages 15–19 reported in Florida.¹⁸

FEDERAL FUNDING FOR SEX EDUCATION, TEEN PREGNANCY PREVENTION, AND ABSTINENCE-ONLY-UNTIL-MARRIAGE PROGRAMS

President's Teen Pregnancy Prevention Initiative

The President's Teen Pregnancy Prevention Initiative (TPPI) funds medically accurate and age-appropriate programs to reduce teen pregnancy. The U.S. Department of Health and Human Services, Office of Adolescent Health (OAH) administers the grant program, which totaled \$105 million in discretionary funding for Fiscal Year (FY) 2012. TPPI consists of two funding tiers that provide grants to local public and private entities. Tier 1 totals \$75 million and provides funding for the replication of evidence-based programs proven to prevent unintended teen pregnancy and address underlying behavioral risk factors. Tier 2 totals \$25 million and provides funding to develop and test additional models and innovative strategies. A portion of the Tier 2 funds, \$15.2 million, was allocated for research and demonstration grants to test innovative approaches, while the remaining funding, \$9.8 million, was allocated for grants to support communitywide initiatives. TPPI also dedicates \$8.5 million in funding to conduct evaluations of individual programs.

TPPI Tier 1: Evidence-Based Programs

The TPPI Tier 1 grant program supports the replication of evidence-based programs proven effective through rigorous evaluation to prevent unintended teen pregnancy, underlying behavioral risk factors, or other associated risk factors.

- The Department of Health and local organizations in Florida received \$7,440,141 in TPPI Tier 1 funding for FY 2012.
- There are six TPPI Tier 1 grantees in Florida: Florida Department of Health; JWB Children’s Services Council of Pinellas County; OIC of Broward County; Planned Parenthood of Greater Orlando, Inc.; Switchboard of Miami; and Trinity Church, Inc.

Florida Department of Health, \$3,565,351 (FY 2012)

The Florida Department of Health serves as the statewide public health agency, providing public-health services and programs to Florida residents through a network of 67 county health departments, located throughout the state, and a central office in Tallahassee. The agency’s Division of Family Health Services, Bureau of Community Health implements the TPPI Tier 1 grant through its Office of Positive Youth Development. Established in June 2009, the office serves to “enhance the skills and improve the health status of Florida’s adolescents and young adults through opportunities and programs, [developed in collaboration with families, communities, schools, and local public and private entities,] for youth to build developmental assets.”¹⁹ Moreover, the office supports a network of community-based organizations in providing positive youth-development opportunities for young people and programming to promote healthy behaviors and reduce risk behaviors, such as “sexual activity, substance abuse, suicide and behaviors that increase risk of unintentional injury and chronic disease.”²⁰ The state adolescent health coordinator directs the office.

With its Tier 1 funds the agency implements *Teen Outreach Program (TOP)* in 26 non-metropolitan counties, partnering with the local health department and school district in each county to implement the program. Programming will serve ninth-grade students in school-based settings in an effort to reduce teen pregnancy, school dropout, and suspension rates among participants. The program plans to reach 6,000 youth per year. The 26 counties served include: Alachua, Baker, Bay, Bradford, Calhoun, DeSoto, Hardee, Highlands, Holmes, Jackson, Jefferson, Lake, Liberty, Madison, Manatee, Marion, Okaloosa, Okeechobee, Pasco, Putnam, Santa Rosa, Seminole, Sevannee, Union, Volusia, and Washington. These counties on average have lower socioeconomic levels and higher rates of teen pregnancy and birth than the majority of Florida counties. The multi-county initiative will seek to evaluate the implementation of *TOP* and its impact using an experimental, longitudinal design. The Department of Health has contracted with the University of South Florida to conduct the evaluation.²¹

TOP is an evidence-based youth development program that engages young people in experiential learning activities in order to “prepare for successful adulthood and avoid problem behaviors.”²² The program is designed for youth ages 12–17 and focuses on reducing rates of school failure, school suspension, and teen pregnancy. *TOP* consists of a curriculum designed to be implemented over the course of nine months, addressing such topics as relationships, peer pressure, decision making, values clarification, goal setting, adolescent development, and sexual health.²³ It also includes a 20-hour community service component that engages participants in activities to enhance knowledge and develop skills, including self-efficacy, communication, conflict-management, and self-regulation. *TOP* can be delivered as an in-school, after-school, or community-based program. An evaluation of the program published in *Child Development* found that young women who participated in *TOP* were significantly less likely to report a pregnancy during the academic year of the program than participants in the control group.²⁴

JWB Children’s Services Council of Pinellas County, \$600,000 (FY 2012)

Located in Clearwater, Florida, the Juvenile Welfare Board Children’s Services Council of Pinellas County (JWB) was established in 1946 as Florida’s first Children’s Services Council (CSC). A CSC is “an independent special district established by Palm Beach County voters, who dedicated a source of funding so more children are born healthy, remain free from abuse and neglect, are ready for kindergarten, and have access to quality afterschool and summer programming.”²⁵ In this role, JWB works to “support the healthy development of all children and their families in Pinellas County through advocacy, research, planning, training, communications, coordination of resources and funding.”²⁶

With its Tier 1 funding, JWB provides positive youth-development programming to youth ages 11–13 through its “Comprehensive Youth Supports” program. The federally funded program serves predominately African-American youth residing in a “high-need, high-risk urban area” of St. Petersburg, Florida, which has substantially higher rates of teen births and STDs than the state average. The overall goals of the program are to prevent teen pregnancy, improve work-related skills, and increase access to medical and dental care among participants. Through the “Comprehensive Youth Services” program JWB implements the *Children’s Aid Society—Carrera Adolescent Pregnancy Prevention Program (CAS—Carrera)* in a community-based, after-school setting. The organization partners with the Pinellas County Health Department to implement programming, which is delivered at the YMCA of St. Petersburg Child Park community center. JWB plans for the program to reach 60 youth annually.²⁷

CAS—Carrera, is an evidence-based positive youth development program designed for students in grades 6 through 12. The program consists of seven integrated components that can be delivered in an after-school or in-school setting over the course of a year. The seven components include Education, Job Club, Family Life and Sexuality Education, Mental Health, Medical and Dental Services, Self Expression, and Lifetime Individual Sports.²⁸ The program uses a positive youth development approach to increase developmental competency and identity formation among participants in order to encourage youth to avoid early parenthood and risky sexual behavior. *CAS—Carrera* runs six days a week throughout the academic year and also includes a summer program component.²⁹ An evaluation of the program published in *Perspectives on Sexual and Reproductive Health* found that, at a three-year follow-up, female participants were significantly less likely to report a pregnancy or report being sexually active than participants in the control group.³⁰

OIC of Broward County, \$998,500 (FY 2012)

OIC (Opportunities Industrialization Centers) of Broward County is a nonprofit, community-based organization located in Fort Lauderdale. OIC of Broward County is an affiliate of OIC of America, a national network of employment and training programs. The organization provides under-resourced and unemployed residents with employment opportunities and training in self-help skills. OICB operates under the principle, “lending a hand up as oppose to a [sic] giving a hand out,” assisting clients to do for themselves and “become productive members of society.”³¹

OIC of Broward County previously partnered with Trinity Church to implement the organization’s abstinence-only-until-marriage (AOUM) program, which was funded by the now-defunct federal Community-Based Abstinence Education (CBAE) program. The program served youth ages 12–18 at community-based organizations, charter schools, churches, and community events in Miami-Dade and Broward counties using two AOUM curricula: *Families United to Prevent Teen Pregnancy (FUPTP)* and *Choosing the Best Plus*. OIC of Broward County served more than 1,500 youth through the program.

The organization also operates its own Healthy Relationship/Marriage Project, which receives funding from the U.S. Department of Health & Human Services, Administration for Children and Families (ACF). The project “is designed to...help young people understand that the sequencing of major life events—getting an education, getting married, then having children—greatly increases the chances for a positive future.”³²

Through the program, OIC of Broward County has delivered community presentations to more than 500 youth, implemented curricular programming to more than 250 youth, and conducted seminars with more than 200 parents.³³

With its TPPI Tier 1 funding, OIC of Broward County partners with local schools and community-based organizations to implement evidence-based programs to middle and high school students, as well as youth in foster care. The overall goal of the program is to expand teen pregnancy-prevention education throughout Broward County” and “reduce teen pregnancy and sexually transmitted infections among teens.”³⁴ OIC of Broward County sub-contracts with four local entities to implement programming: the FLITE (Fort Lauderdale Independence & Education) Center, Lauderdale Lakes Charter Academy, Lauderdale Middle School/Lauderhill Community YMCA Center, and Memorial Healthcare System. Together, these organizations implement programming to at-risk youth at four Broward County public middle schools, two public high schools, one combined middle school and high school, and seven community-based organizations. Programming serves predominately African-American youth. OIC of Broward County and its partners use *Becoming A Responsible Teen* (BART) with middle school students and *Reducing the Risk* with high school students. The program plans to reach approximately 1,400 youth annually.³⁵

BART is an evidence-based HIV/AIDS-prevention education curriculum designed for African-American youth ages 14–18. *BART* teaches students to reduce sexual risk taking by promoting safer sex practices while also teaching that abstinence is the most effective way to prevent HIV and unintended pregnancy. The eight-session curriculum combines education with behavioral skills training on assertion, refusal, self-management, problem solving, risk recognition, and correct condom use.³⁶ *BART* includes interactive activities, group discussions, and role plays developed by teens. It is designed for implementation in community-based settings and with single-sex groups. An evaluation of the program published in the *Journal of Consulting and Clinical Psychology* found that it increased participant knowledge of HIV and AIDS and increased participants’ ability to manage the pressure to engage in unprotected sex as well as to provide information to their peers regarding safe sexual practices. The program was also found to delay the initiation of sexual intercourse, reduce the frequency of sex and the incidence of unprotected sex, and reduce the incidence of unprotected anal sex. Among male participants, the program was found to increase condom use.³⁷

Reducing the Risk: Building Skills to Prevent Pregnancy, STD and HIV is an evidence-based pregnancy-, STD-, and HIV-prevention curriculum designed for classroom use with students in the ninth and tenth grades. It is appropriate for use with multiethnic populations.³⁸ *Reducing the Risk* aims to reduce high-risk behaviors among participants and emphasizes strategies for abstaining from sex or practicing safer sex. The 16-lesson curriculum addresses both abstinence and contraception use and includes experiential activities that teach students to develop refusal, negotiation, and communication skills. An evaluation of the program published in *Family Planning Perspectives* found that it increased parent-child communication, especially among Latino youth, delayed the initiation of sexual intercourse, and reduced incidence of unprotected sex among lower-risk youth who participated in the program.³⁹

Planned Parenthood of Greater Orlando, Inc., \$477,790 (FY 2012)

Planned Parenthood of Greater Orlando (PPGO) is an affiliate of Planned Parenthood Federation of America, a leading national provider of and advocate for sexual and reproductive health care. The Orlando affiliate provides reproductive health services and education to four counties within central Florida, including Brevard, Orange, Osceola, and Seminole.

PPGO uses its TPPI funds to implement the Teens RISE! (Really Important Sex Education) Project. The program focuses on replicating evidence-based interventions in order to reduce sexual risk behaviors, prevent unintended pregnancies, and reduce the occurrence or reoccurrence of STDs among program participants. Through Teen RISE!, PPGO implements two separate interventions: one uses *SiHLE* (*Sisters Informing, Healing, Living and Empowering*) to serve young women ages 14–18 in a community-based setting and the other uses the *Safer Sex* intervention to provide one-on-one instruction to high-risk youth ages 15–19 in a clinical setting. PPGO plans to reach approximately 1,700 youth annually through the programs.⁴⁰

PPGO uses *SiHLE* with young African-American women ages 14–18 who reside in the Ivey Lane and Pine Hills communities, two areas with the highest rates of teen birth in Orange County. The program aims to provide culturally relevant programming to sexually active young women in order to reduce their risk of HIV and unintended pregnancy. PPGO partners with the Orange County Health Department to implement *SiHLE* in a church and community-based setting.⁴¹

SiHLE is an evidence-based HIV- and STD-prevention education program designed for African-American females ages 14–18 who are sexually active and at high risk for HIV. It is a peer-led, social skills training intervention based on social cognitive theory and the theory of gender and power.⁴² The program consists of four four-hour sessions that are delivered on consecutive Saturdays in a community-based setting. Sessions are led by an African-American female adult and two peer-facilitators, ages 18–21. The sessions are designed to reinforce ethnic and gender pride and address HIV-prevention strategies, the transmission of STDs, communication and negotiation skills, condom-use skills, self-efficacy, healthy relationships, and personal empowerment. The program incorporates group discussion, lectures, games, and role-playing. Participants also complete homework assignments that provide opportunity for reflection and skills practice. An evaluation of the program published in the *Journal of the American Medical Association* found that, at a six-month follow-up, program participants were significantly less likely to report being pregnant and significantly more likely to report having used condoms consistently in the previous six months than participants in the control group. In addition, at a 12-month follow-up, participants were significantly more likely to report consistent condom use in the previous 30 days and having used a condom during last sexual intercourse than participants in the control group.⁴³

The *Safer Sex* intervention provides young women ages 15–19 who are seeking or receiving services from PPGO with access to information on preventing STDs and other clinic resources. The program is designed to engage young, sexually active women from Orange County in one-on-one, face-to-face education sessions offered in a non-judgmental and teen-friendly environment. PPGO implements *Safer Sex* at both of its clinic locations. The Orange County Healthy Start Coalition partners with PPGO to provide referrals for the program.

Safer Sex is a clinic-based intervention designed for female adolescents. The intervention is delivered to participants in a one-on-one setting and seeks to reduce their incidence of STD infection and improve their efficacy of condom use. The intervention is administered by a female health educator and begins with the viewing of a brief video clip that uses celebrities to dramatize buying condoms as well as negotiating condom use. The video is followed by a 30-minute discussion with the health educator, which is tailored to meet the interests and risk level of the individual participant. The discussion addresses the consequences of having unprotected sex, methods for preventing unintended pregnancy and STDs, including HIV, secondary abstinence, and condom-use skills. Participants also conduct a self-assessment to evaluate their sexual risk and are provided with written information about safer sex and contraception use. In addition, the intervention includes one-, three-, and six-month booster sessions at which time participants are invited back to the clinic for follow-up. An evaluation of the program published in the *Archives of Pediatrics and Adolescent Medicine* found, at a six-month follow-up, that the intervention reduced the incidence of multiple sexual partners among participants.⁴⁴

Switchboard of Miami, \$800,000 (FY 2012)

Switchboard of Miami is a private, nonprofit organization that provides telephone crisis counseling, suicide prevention, information, and referral services to the Miami-Dade County community. Its mission is to “[connect] all people in need with community resources, [provide] counseling and [empower] individuals 24 x 7 with just one call.”⁴⁵ Switchboard’s prevention and clinical services department also provides free school- and community-based education and prevention programs to youth. Programming is designed for youth at risk of “alcohol, tobacco, and drug abuse, violence, early pregnancy, domestic violence, and other high-risk behaviors.”⁴⁶

The organization previously received federal AOUM funding through the now-defunct CBAE and Adolescent Family Life Act (AFLA) grant programs. With the funding, Switchboard implemented Project REAL (Reinforcing Education through Abstinence and Leadership) and Project STRENGTH. Both programs used the *Choosing the Best* curricula, one of the more popular AOUM programs in the country.

With its TPPI funding, Switchboard operates Project WISE (Wisdom Independence Support Education), which serves predominantly African-American and Latino high-risk, urban youth. The project aims to “enhance protective factors and positive health behaviors related to the prevention of HIV, other STDs, and unintended pregnancy.”⁴⁷ The organization noted in its application for federal funding, “The teen time bomb of pre-marital sex is spreading STDs, HIV, teen pregnancy and its associated problems among our County’s [sic] youth.”⁴⁸ Through the project, Switchboard of Miami implements *All4You!* to youth at two alternative high schools, one low-performing high school, and an after-school/summer program serving Haitian youth. The targeted intervention sites include Corporate Academy North Alternative School, Corporate Academy South Alternative School, Homestead Senior High School, and GALATA Social Services, Inc. The project plans to reach approximately 800 youth annually.

All4You! is an evidence-based pregnancy-, STD-, and HIV-prevention program designed for students ages 14–18 attending alternative high schools. It is adapted from two existing evidence-based programs, *Be Proud! Be Responsible!* and *Safer Choices*. The program, which includes both classroom instruction and a service learning component, aims to reduce the frequency of unprotected sex among participants. The 14-session classroom curriculum consists of nine lessons, which address STD-, HIV- and pregnancy-prevention; the risk of STD transmission and unintended pregnancy; negotiation skills; and condom-use skills, among other topics. *All4You!* includes interactive activities such as role-playing, condom demonstration, group discussion, and educational games. The service learning component engages participants in volunteer activities. An evaluation of the program published in *AIDS Education and Prevention* compared the behavior of participants to that of peers in a control group six months after the intervention. Program participants reported a significantly lower frequency of having sex without a condom in the previous three months, were significantly more likely to report having used a condom at last sexual intercourse, and reported a significantly lower frequency of sexual intercourse in the previous three months than participants in the control group.⁴⁹

Trinity Church, Inc., \$998,500 (FY 2012)

Trinity Church is a church and social-services ministry located in Miami Gardens. Included in its statement of “fundamental truths,” the church states: “We believe the BIBLE, as originally given, to be without error, the fully inspired and infallible WORD of GOD and the supreme and final authority in all matters of faith and conduct.”⁵⁰ Trinity describes its work as “[assisting] in the transformation of individuals and families in our community.”⁵¹ Among its services, the church provides medical care, job training, assistance with home ownership, and parenting classes. Trinity Church’s senior pastors are also the founders of Peacemakers, an outreach ministry serving inner cities. Both Trinity Church and Peacemakers receive federal, state, and local government funding to provide services to low-income populations in Miami-Dade County.⁵²

Trinity previously received federal AOUM funding through the now-defunct Community Based Abstinence Education CBAE grant program. Between FYs 2007–2009, the organization received \$1.7 million in CBAE funds. Trinity partnered with OIC of Broward County to provide AOUM programming. (See the information above on OIC of Broward County for more information on the organization’s CBAE program.) Trinity also received Healthy Marriage Initiative funding from the U.S. Department of Health and Human Services and operated a five-year grant through the initiative totaling \$550,000 annually for FYs 2006–2010.

With its TPPI funding, Trinity Church partners with local organizations to provide programming to “primarily African-American and Latino youth living in poverty.”⁵³ The program targets middle and high school students ages 12–19 living in Miami-Dade County, with the goal of reducing teen pregnancy and STD infection among youth. The church’s Peacemakers ministry serves as the lead agency for the grant and sub-contracts funding to three partner organizations: Fit Kids of America, Inc.; Holy Cross Christian Day School; and Teen Up-Ward Bound. The organizations implement *BART* and *Reducing the Risk* in both school- and community-based settings. (See the information above on OIC of Broward County for more information on *BART* and *Reducing the Risk*.) Programming is implemented to middle school students at Holy Cross Christian Day School and Glades Middle School and to high school students at North Miami Senior High School and Northwestern High School. Trinity and its partners also implement programming to other targeted youth.⁵⁴ The TPPI program plans to reach approximately 1,200 youth annually.

TPPI Tier 2: Innovative Approaches

The TPPI Tier 2 grant program supports research and demonstration programs in order to develop, replicate, refine, and test additional models and innovative strategies for preventing teenage pregnancy.

- There is one TPPI Tier 2 grantee in Florida, Live the Life Ministries, Inc., which received \$891,533 in FY 2012.

Live the Life Ministries, Inc., \$891,533 (FY 2012)

Live the Life Ministries is a Christian organization that operates offices in Lakeland and Tallahassee and provides faith-based programming and marriage education to young people of the Florida Big Bend region. Its mission is “to strengthen marriages and families by providing classes and events to help build the foundation for a healthy marriage and provide resolutions to relationship conflicts.”⁵⁵ Live the Life’s faith-based programs include, among others, CROSWILD, a student ministry which aims to “ignite this generation to live boldly and wild for the cross of Jesus Christ,” and Champions and Championettes, dual, single-sex leadership programs for high school students that teach young men “the ‘10 Aspects of Being a Godly Man’” and show young women “the value and preciousness of being a Godly Woman.”⁵⁶ The organization also offers programs for married couples that use biblical teachings to strengthen marriages as well as a spring-break program for youth that provides lessons on selecting a marriage partner.

Live the Life Ministries previously received AOUM funding through the now-defunct federal CBAE program. For FYs 2008 and 2009, the organization received nearly \$1.2 million in CBAE funds. Live the Life also receives federal funding through the Healthy Marriage Initiative, which supports its marriage-skills and marriage-preparation courses.

With its Tier 2 grant, Live the Life implements The WAIT Project, which trains 80 teachers to use *WAIT (Why Am I Tempted?) Training* in schools. *WAIT Training* is an AOUM curriculum that uses fear- and shame-based tactics to promote abstinence as the only appropriate behavior outside of marriage. SIECUS reviewed the most recent edition of *WAIT Training* and found that, similar to previous editions, it includes little medical or biological information about puberty and reproduction.

Instead, it contains information and statistics promoting the benefits of marriage, activities and skill-building exercises for developing healthy relationships, and information on STDs, including HIV. It also contains messages promoting biased views of gender, sexual orientation, and family structure. For example, *WAIT Training* explains, “When it comes to sex, men are like microwaves and women are like crockpots. . . . [M]en respond sexually by what they see and women respond sexually by what they hear and how they feel about it.”⁵⁷

The WAIT Project emphasizes that young people “should postpone sexual activity, and that practicing abstinence is the only way to eliminate the risk for pregnancy and STDs, including HIV.”⁵⁸ At its core, however, the program aims to equip young people for marriage and ‘successful’ adulthood. As stated in its Tier 2 grant application:

“Modern teenagers lack what earlier generations took for granted: a normative sequence for the timing of sex, marriage, and parenthood. . . . While young people aspire to successful futures and marriage, they are often unaware of the simple ‘success’ formula that can greatly help them achieve both. Namely, graduate from high school, don’t have sex until you are married, and don’t marry during the teen years. By doing so, young people greatly reduce their chances of poverty and divorce.”⁵⁹

Through the project, Live the Life Ministries trains teachers throughout a 14-county service area to deliver classroom instruction to middle school and high school students. Live the Life plans for teachers to implement *WAIT Training* to students in single-sex classes. The organization directly partners with 15 schools: Columbia County High School, Fort White High School, Fort White Middle School, Jefferson County Middle/High School, Lakeland Christian School, Lake City Middle School, Liberty County Bristol Youth Academy, Madison Central Middle School, Madison High School, Riversprings Middle School, Taylor County Middle School, Taylor County High School, Richardson Middle School, Tolar Middle School, and Wakulla County High School.⁶⁰

As part of The WAIT Project, Live the Life also offers an Alternative Spring Break vacation program for youth, Father of the Year Essay contest, and Parent Talk programs.

TPPI Tier 2: Communitywide Initiatives

The TPPI Tier 2 grant program also supports communitywide initiatives to reduce rates of teenage pregnancy and births in communities with the highest rates. The program awards grants to national organizations as well as state- and community-based organizations. Funded national partners provide training and technical assistance to local grantees. The Centers for Disease Control and Prevention (CDC) administer the grant program in partnership with OAH.

- There are no TPPI Tier 2 Communitywide Initiatives grantees in Florida.

Personal Responsibility Education Program

The Personal Responsibility Education Program (PREP) totals \$75 million per year for FYs 2010–2014 and is the first-ever dedicated funding stream for more comprehensive approaches to sexuality education. The ACF administers the grant. PREP includes a \$55 million state-grant program; \$10 million to fund local entities through the Personal Responsibility Education Innovative Strategies (PREIS) Program; \$3.5 million for Tribal PREP, for tribes and tribal organizations; and \$6.5 million for evaluation, training, and technical assistance. Details on the state-grant program, PREIS, and Tribal PREP are included below.

PREP State-Grant Program

The PREP state-grant program supports evidence-based programs that provide young people with medically accurate and age-appropriate information for the prevention of unintended pregnancy, HIV/AIDS, and other STDs. The grant program totals \$55 million per year and allocates funding to individual states. The grant does not require states to provide matching funds. Funded programs must discuss abstinence and contraception, and place substantial emphasis on both. Programs must also address at least three of the following adulthood preparation subjects: healthy relationships, positive adolescent development, financial literacy, parent-child communication skills, education and employment skills, and healthy life skills.

- Florida declined PREP funds for FY 2012.

Personal Responsibility Education Innovative Strategies (PREIS)

PREIS supports research and demonstration programs to develop, replicate, refine, and test innovative models for preventing unintended teen pregnancy. ACF administers the grant program in collaboration with OAH and provides a total of \$10 million in funding directly to local public and private entities.

- There are no PREIS grantees in Florida.

Tribal Personal Responsibility Education Program (Tribal PREP)

Tribal PREP supports the development and implementation of comprehensive teen-pregnancy prevention programs within tribes and tribal communities. Tribal PREP programs target youth ages 10–19 who are in or are aging out of foster care, homeless youth, youth with HIV/AIDS, pregnant and/or parenting youth who are under 21 years of age, and youth who live in areas with high adolescent birth rates. Programs must address at least three of the following adulthood preparation subjects: healthy relationships, positive adolescent development, financial literacy, parent-child communication skills, education and employment skills, and healthy life skills.

- In FY 2012, 16 tribes and tribal organizations from nine states received a total of \$6.5 million.
- There are no Tribal PREP grantees in Florida.

Competitive Personal Responsibility Education Program (CPREP)

CPREP grants support evidence-based programs that provide young people with medically accurate and age-appropriate information for the prevention of unintended pregnancy, HIV/AIDS, and other STDs. Organizations and institutions in states and territories that did not apply for PREP formula grants in either of the past two fiscal years were eligible to submit competitive applications for CPREP grants. Thirty-seven grants, totaling \$18.6 million, were awarded in FY 2012 to organizations in American Samoa, the Commonwealth of Northern Mariana Islands, Florida, Guam, Indiana, the Marshall Islands, North Dakota, Palau, Texas, and Virginia.

- Ten local entities in Florida received a total of \$4,833,478 in CPREP funds for FY 2012: OIC of Broward County; South Broward Hospital District; Northeast Florida Healthy Start Coalition; Womankind, Inc.; Family and Children of Faith Coalition; School Board of Orange County; Family Resources, Inc.; Planned Parenthood of Southwest and Central Florida; Planned Parenthood of South Florida and the Treasure Coast; and Unity Family Community Center.

OIC of Broward County, Inc., \$900,000 (FY 2012)

OIC (Opportunities Industrialization Centers) of Broward County is a nonprofit, community-based organization located in Fort Lauderdale. OIC of Broward County is an affiliate of OIC of America, a national network of employment and training programs. The organization provides under-resourced and unemployed residents with employment opportunities and training in self-help skills. Their mission is to “be a leader in providing quality self-help skills and employment opportunities for disadvantaged and underemployed residents of South Florida; thus assisting them to become productive members of society.”

With its CPREP funding OIC of Broward County will partners with local schools and community-based organizations to implement evidence-based programs to middle and high school students.⁶¹ The programs focus on “on pregnancy and sexually transmitted infections (STIs, including HIV), risks of sexual activity, pregnancy and STI prevention through sexual delay and use of contraception, communication, and refusal skills.”⁶² The program is designed for youth ages 10–19 and pregnant or parenting teens under age 21, and targets African-American, Latino, and LGBTQ youth who are in danger of dropping out of high school, in juvenile facilities, in or aging out of foster care, or vulnerable for becoming homeless.⁶³ OIC of Broward County and its partners will be using *Making Proud Choices* with middle school students and *Reducing the Risk* with high school students.⁶⁴ (See the information above on TPPI Tier 1: OIC of Broward County for more information on *Reducing the Risk*.)

Making Proud Choices! is an evidence-based STD-, HIV-, and pregnancy-prevention curriculum designed for use with African-American, Latino, and white adolescents ages 11–13. The curriculum aims to help youth understand the poor reasoning and decision making that can lead to STD/HIV infection and/or unintended pregnancy, as well as to increase their confidence, negotiation skills, and self-efficacy in using condoms. The program consists of eight one-hour sessions and can be implemented in school- or community-based settings. *Making Proud Choices!* includes interactive and skill-building activities that are designed to “increase comfort with practicing condom use, address concerns about negative effects of practicing safer sex, and build skills in condom use and negotiation.”⁶⁵ An evaluation of the program published in the *Journal of the American Medical Association* showed that program participants reported more consistent condom use and less unprotected sex as well as a higher frequency of condom use than those in the control group.⁶⁶

Northeast Florida Healthy Start Coalition, Inc., \$526,339 (FY 2012)

Northeast Florida Healthy Start Coalition is part of a statewide network of community-based organizations to reduce Florida’s high infant mortality and improve the lives of pregnant women and their families.⁶⁷ Their mission is to “lead a cooperative community effort to reduce infant mortality and improve the health of children, childbearing women and their families in Northeast Florida,” and they cover Baker, Clay, Duval, Nassau, and St. Johns counties.⁶⁸

The Coalition has partnered with Boys & Girls Clubs of Northeast Florida, the Bridge of Northeast Florida, the Jacksonville Area Sexual Minority Youth Network, the Jacksonville Housing Authority, the Nassau County Health Department, and WRH Realty Services, to use their CPREP grant to support the Coalition’s 4Me Teen Health Project, a community-based comprehensive sex-education and prevention program.⁶⁹ The program focuses on preventing HIV, STDs, and teen pregnancy, and targets youth ages 12–17 that live in low-income housing complexes.⁷⁰ The program also includes a parent component that teaches parents how to talk to their teens about abstinence, safe sex, and condom use.⁷¹

Womankind, Inc., \$200,845 (FY 2012)

Womankind is a health center based in Key West, Florida that “[provides] accessible and affordable women’s primary, gynecologic and mental health care that is safe, individualized, humanistic and prevention focused, to women throughout the lifecycle, regardless of ethnicity or socioeconomic level.”⁷² They believe that “all women should have access to the health care provider and facility of their choice, and that that each woman has the ultimate right and responsibility of choice in all health care decisions.”⁷³

Womankind will use their CPREP grant to implement comprehensive sex education in Monroe County School District. They will use *Draw the Line/Respect the Line* for grades six through eight, and *Safer Choices* for grades nine and ten.⁷⁴ (See the information above on the School District of Manatee County for more information on *Draw the Line/Respect the Line*.)

Safer Choices is an evidence-based HIV-, STD-, and pregnancy-prevention program designed for students in the ninth and tenth grades. The program consists of experiential activities developed to build communication skills, skills for delaying sexual initiation, and condom-efficacy skills for those students who are or become sexually active. *Safer Choices* has five program components, including a “school health protection council” that involves students, parents, school faculty, and community members; a 20-session classroom-based curriculum; a peer team or club responsible for hosting school-wide activities; a parent education component with parent-child activities; and activities to expose and increase students’ awareness of local support services. An evaluation of the program published in the *Journal of Adolescent Health* found that the program was effective in delaying the initiation of sexual intercourse among Latino youth. Additional evaluations of *Safer Choices* showed that among participants it increased the use of contraception, increased condom use, reduced incidence of unprotected sex, and reduced the number of sexual partners with whom condoms weren’t used.⁷⁵

Family and Children Faith Coalition, Inc., \$633,505 (FY 2012)

Family and Children Faith Coalition is a nonprofit group of faith-based organizations in Miami-Dade county that “[mentors] organizations and [develops] children and youth by connecting them to effective programs, resources and volunteers so that [their] communities thrive.”⁷⁶

With its CPREP funding Family and Children Faith Coalition will implement Project U-Turn, a program that “seeks to reduce teen pregnancy and HIV/AIDS risk behavior among Miami-Dade youth by inspiring them to create positive futures for themselves.”⁷⁷ The program targets middle school children ages 11–14 and uses *Project AIM (Adult Identity Mentoring)* as its curriculum.⁷⁸

Project AIM is an evidence-based youth development program designed to help adolescents identify their future goals and consider how engaging in risky behavior may negatively impact their ability to achieve those goals. The program is based on the “Theory of Possible Selves,” which proposes that an individual’s motivation is determined by the ability to imagine his future self. Those that are capable of imagining both possible positive and negative futures are therefore more inclined to work toward their life goals. The school-based intervention consists of 10 sessions which are divided into four units: 1) Legacy, Role Models, and Peers; 2) Self-Projection: Expanding Visions of Possible Selves; 3) Self-Expression through Work: Development of Possible Self; and 4) Skills of Fulfilling Positive Future Possible Selves. The lessons consist of group discussions, interactive activities, and role playing exercises to encourage youth to explore their personal interests, social surroundings, and their goals for their future adult life. *Project AIM* is designed for use with African-American youth ages 11–14 and is also appropriate for use with Latino youth. Although it is a school-based program, it can also be implemented in community-based settings. An evaluation of the program published in the *Journal of Adolescent Medicine* found that, at a 19-week follow-up, adolescents who participated in the program were significantly less likely to report having had sexual intercourse than participants in the control group; and, at a one-year follow-up, male participants were significantly less likely to report having had sexual intercourse than participants in the control group.

Planned Parenthood of Southwest and Central Florida, Inc., \$356,427 (FY 2012)

Planned Parenthood of Southwest and Central Florida (PPSWCF) “provides vital sexual health services and comprehensive sexuality education to women, men and teens in Sarasota, Manatee, Tampa, St. Petersburg, Ft. Myers, Lakeland and Winter Haven.”⁷⁹ The organization is an affiliate of Planned Parenthood Federation of America, a leading national provider of and advocate for sexual and reproductive health care. Their mission is to “ensure the right of all individuals to manage their sexual and reproductive health by providing direct services, education and advocacy.”⁸⁰ PPSWCF accomplishes their mission through a commitment to “providing comprehensive, age-appropriate and medically accurate sexuality education, and advocating for policies that enable Americans to access comprehensive reproductive and sexual health care, education, and information.”⁸¹

With their CPREP grant PPSWCF will implement *TOP* in schools, public housing facilities, and community centers marked by health and economic disparities.⁸² PPSWCF educators will provide the program which, “works to promote healthy relationships and career goals throughout Hillsborough, Pinellas and Polk counties.”⁸³ (See the information above on the Florida Department of Health for more information on *TOP*.)

Planned Parenthood of South Florida and the Treasure Coast, \$422,902 (FY 2012)

Planned Parenthood of South Florida and the Treasure Coast (PPSFTC) “believes that reproductive self-determination and the right to privacy are core human freedoms.”⁸⁴ The organization is an affiliate of Planned Parenthood Federation of America, a leading national provider of and advocate for sexual and reproductive health care. Their mission is to “provide comprehensive sexual health care through the provision of clinical services, education and advocacy.”⁸⁵

With their CPREP grant money PPSFTC is implementing *TOP* to 1,172 youth in Palm Beach and Miami-Dade counties.⁸⁶ The program is implemented in schools, after school, and in community-based organizations.⁸⁷ (See the information above on the Florida Department of Health for more information on *TOP*.)

At the time of publication, more information on the following grantees was not available: Family Resources, Inc. (\$500,000), School Board of Orange County (\$610,217), South Broward Hospital District (\$304,876), and Unity Family Community Center, Inc. (\$367,397).

Title V State Abstinence Education Grant Program

The Title V abstinence-only-until-marriage program (Title V AOUM) allocates \$50 million per year to states for FYs 2010–2014. ACF administers the grant program. The Title V AOUM program requires states to provide three state-raised dollars or the equivalent in services for every four federal dollars received. The state match may be provided in part or in full by local groups. All programs funded by the Title V AOUM program must promote abstinence from sexual activity as their exclusive purpose and may provide mentoring, counseling, and adult supervision toward this end. Programs must be medically accurate and age-appropriate and must ensure abstinence is an expected outcome.

- The Florida Department of Health received \$2,829,101 in federal Title V AOUM funding for FY 2012.
- The department chose to sub-grant the funds to 19⁸⁸ local public and private entities.⁸⁹
- In Florida, sub-grantees contribute to the match through a combination of direct revenue and in-kind services.

The Florida Department of Health administers the state’s Title V AOUM grant in collaboration with 19 county health departments and community- and faith-based organizations. Funded organizations are required to provide abstinence programming and “abstinence promoting activities” for youth between the ages of 12–19. Programs are also encouraged to engage parents and the local community. The Department of Health restricted the list of eligible curricula to those identified in a review conducted for the U.S. Office of Adolescent Health to be evidence-based and also meet the Title V A–H criteria. The curricula currently approved for use by the sub-grantees are: *Heritage Keepers*, *Making a Difference!*, *Project AIM*, *Promoting Health Among Teens! (PHAT)*, and *TOP*. However, none of the 19 funded sub-grantees chose to use *TOP*.⁹⁰

SIECUS reviewed *Heritage Keepers*, *Abstinence Education I*, and found that it contains very little information about important topics in human sexuality, such as puberty, anatomy, and sexual behavior. Even topics that are frequently discussed in detail in other AOUM programs, such as condoms and STDs, receive very little mention. Instead, the curriculum devotes most of its lessons to the importance of marriage and abstinence before marriage. It relies on messages of fear and shame and promotes biased views of gender, marriage, and pregnancy options.

For example, the curriculum tells students, “Males are more sight orientated whereas females are more touch orientated. This is why girls need to be careful with what they wear, because males are looking! The girl might be thinking fashion, while the boy is thinking sex. For this reason, girls have a responsibility to wear modest clothing that doesn’t invite lustful thoughts.”⁹¹

Making a Difference! is an evidence-based pregnancy-, STD-, and HIV-prevention education curriculum that emphasizes abstinence from sexual activity. Adapted from the evidence-based curriculum, *Be Proud! Be Responsible!*, *Making a Difference!* aims to increase participants’ knowledge about HIV, STD, and pregnancy prevention as well as their confidence to negotiate sexual pressure and intention to abstain from sex. It is designed for use with African-American, Latino, and white adolescents ages 11–13 and can be implemented in school- or community-based settings. The eight-module curriculum includes interactive activities, small-group discussions, and skill-building exercises, including role plays, aimed to increase comfort and efficacy with practicing abstinence. An evaluation of the curriculum published in the *Journal of American Medical Association* found that, at a three-month follow-up, participants in the program were less likely to report having had sexual intercourse in the three months prior than peers in the control group. Evaluation results also showed that the program helped to delay sexual initiation among program participants who were sexually inexperienced.⁹²

Project AIM is an evidence-based youth development program designed to help adolescents identify their future goals and consider how engaging in risky behavior may negatively impact their ability to achieve those goals. The program is based on the “Theory of Possible Selves,” which proposes that an individual’s motivation is determined by the ability to imagine his future self. Those that are capable of imagining both possible positive and negative futures are therefore more inclined to work toward their life goals. The school-based intervention consists of 10 sessions which are divided into four units: 1) Legacy, Role Models, and Peers; 2) Self-Projection: Expanding Visions of Possible Selves; 3) Self-Expression through Work: Development of Possible Self; and 4) Skills of Fulfilling Positive Future Possible Selves. The lessons consist of group discussions, interactive activities, and role playing exercises to encourage youth to explore their personal interests, social surroundings, and their goals for their future adult life. *Project AIM* is designed for use with African-American youth ages 11–14 and is also appropriate for use with Latino youth. Although it is a school-based program, it can also be implemented in community-based settings. An evaluation of the program published in the *Journal of Adolescent Medicine* found that, at a 19-week follow-up, adolescents who participated in the program were significantly less likely to report having had sexual intercourse than participants in the control group; and, at a one-year follow-up, male participants were significantly less likely to report having had sexual intercourse than participants in the control group.

PHAT (abstinence-only intervention) is an evidence-based curriculum developed to increase knowledge and awareness about STDs, including HIV; increase an understanding of how abstinence can prevent pregnancy and HIV/STDs; and build refusal and negotiation skills for practicing abstinence. *PHAT* aims for participants to abstain from vaginal, oral, and anal intercourse until a time later in life when they are ready to handle the potential consequences of having sex and neither discourages nor encourages condom use. Although originally intended for use with urban, African-American youth in small groups, the intervention can be adapted for use with larger groups and those in rural settings.⁹³ The curriculum is designed as eight one-hour modules that include group discussions, videos, role playing, skill-building activities, games, and other experiential exercises. It is appropriate for use in both school- and community-based settings. An evaluation of the program published in the *Archives of Pediatrics & Adolescent Medicine* found that, at a 24-month follow-up, participants who were sexually inexperienced at the time of the program were significantly less likely to have initiated sex than participants in the control group.⁹⁴

FLORIDA

Competitive Abstinence Education (CAE) Grant

Administered by the ACF, the CAE grant program provides grants for the purpose of “abstinence education” as defined by the A–H statute in Title V of the Social Security Act, as well as for mentoring, counseling, and adult supervision aimed at the promotion of abstaining from sex outside of marriage.

As currently implemented by ACF, the programs must also be medically accurate. In FY 2012, \$4.7 million was granted to nine grantees across eight states through a competitive application process.

- There is one CAE grantee in Florida, Abstinence Between Strong Teens International, Inc. (ABSTI), which received \$649,342 in FY 2012. ABSTI uses its funding to support its Project Image program, which implements ABSTI’s *Building My House* curriculum. At the time of publication, more information on this grantee was not available.

COMPREHENSIVE APPROACHES TO SEXUALITY EDUCATION

SIECUS has identified some examples of model programs, policies, and best practices being implemented in Florida public schools that provide more comprehensive sex education to young people.⁹⁵

Revised School District Policy

School Districts Revise Their Sex Education Policies

A growing number of Florida school districts are revising their health education policies to eliminate requirements that instruction teach abstinence-until-marriage and implement more comprehensive sex education programs, which include information on sexual health practices and the prevention of STDs, HIV, and unintended pregnancy along with information on condoms and contraception, among other topics. Since 2007, at least six school districts have adopted more comprehensive sex education policies, including Brevard, Broward, Collier, Palm Beach, St. Lucie, and Volusia county school districts.

In 2007, the St. Lucie County School Board voted four–one to incorporate *Get Real About AIDS*, an evidence-based program, into the health education curriculum of all district middle and high schools.⁹⁶ The board’s vote revised the district’s previous abstinence-only policy. (See the section below on *Comprehensive Sex Education in Public Schools* for more information on the sex education program in St. Lucie.)

The Collier County School Board voted on November 19, 2009, to require that human sexuality instruction provided in district schools include information on sexual and reproductive health that is comprehensive, evidence based, medically accurate, age appropriate, and teaches students about contraception and condoms in addition to abstinence. The board voted three–two to implement the new policy.⁹⁷

Comprehensive Sex Education Programs in Public Schools

Broward County Public Schools

Broward County Public Schools (BCPS) receive funding from the Centers for Disease Control and Prevention’s Division of Adolescent and School Health (CDC-DASH) to provide HIV-prevention education as an aspect of the district’s school health program. The school district is one of four local agencies—also including Miami-Dade County Public Schools, Orange County Public Schools, and the School District of Palm Beach County—that receives CDC-DASH funding in part to advance HIV-prevention education in schools. With a portion of its funding, BCPS provides HIV/AIDS- and STD- prevention education training to school staff. The funding also supports work to enhance HIV curricula used in district schools and school district policies and procedures that govern HIV-prevention education implemented to students.⁹⁸

In order to provide HIV-prevention education training to school staff, BCPS developed a multimedia training strategy in 2006 that incorporated the use of online training, television broadcasts, training updates distributed on CD-ROM, and the district's internal electronic network. The strategy includes a five-week online course for teachers that addresses "data, policies, procedures, curriculum, prevention strategies, testing techniques, and related facts" regarding HIV and HIV-prevention education. A total of 635 school staff received training. Teachers can now also access model lesson plans among other resources through the district's internal electronic network.⁹⁹

Miami-Dade County Public Schools

Miami-Dade County school district, which is a CDC-DASH-funded local agency, uses a portion of its funds to "strengthen HIV prevention education in grades K–12." To this end, the school district has worked to integrate HIV, STD, and unintended pregnancy prevention education into health education and other core subject areas in grades K–12. The district's HIV/AIDS Education Program is responsible for disseminating the district's HIV/AIDS curriculum to schools. The program also collaborates with other school district staff, the local health agency, local universities, community-based organizations, parents, and students to evaluate the HIV-, STD-, and unintended-pregnancy-prevention activities implemented in schools.¹⁰⁰

School District of Manatee County

In April 2010, the school board of Manatee County approved a plan to offer a more comprehensive sex education curriculum in schools, due to the high number of teen births among middle school girls in the district.¹⁰¹ The school board revised the district's health education guidelines to require schools to teach abstinence-based human sexuality instruction. The new guidelines require instruction to emphasize "sexual abstinence as the expected standard for students" while also providing "information concerning the risks and prevention of pregnancy and sexually transmitted diseases."¹⁰² In conjunction with the policy change, the district applied for, and was later awarded, a county grant totaling \$313,500 to implement an intensive, abstinence-based teen pregnancy prevention program in four middle schools. The program, "It's Your Choice," uses the curriculum, *Draw the Line/Respect the Line*, to provide school-based instruction. The program also includes before- and after-school programming and health and outreach services.¹⁰³ The school district implements "It's Your Choice" in Horizons Academy, Lincoln, Johnson, and Harlee middle schools.¹⁰⁴

Draw the Line/Respect the Line is an evidence-based program designed to teach youth in grades six through eight to postpone sexual involvement while providing information about condoms and contraception. The school-based curriculum consists of 19 sessions divided between grades six through eight and includes group discussions, small-group activities, and role playing exercises focused on teaching youth how to establish and maintain boundaries regarding sexual behavior. Lessons for sixth grade students address using refusal skills; lessons for the seventh grade focus on setting sexual limits, the consequences of unprotected sex, and managing sexual pressure; and eighth grade students practice refusal and interpersonal skills and receive HIV/STD-prevention education. The program also includes individual teacher consultations and parent engagement through homework activities. Although it is designed for use in the classroom, the program may also be delivered in a community-based setting. An evaluation of the program published in the *American Journal of Public Health* found—at one-, two-, and three-year follow-ups—that male participants were significantly less likely to report ever having had sexual intercourse or having had sexual intercourse during the previous 12 months compared to participants in the control group.¹⁰⁵

Orange County Public Schools

Through its cooperative agreement with CDC-DASH, Orange County Public Schools (OCPS) has developed an HIV/AIDS Prevention Program that aims to increase HIV-prevention awareness among students in grades six through 12.

The program also provides professional development training to teachers and school staff that includes discussions on model HIV curricula, as well as the district’s HIV policy and guidelines for human sexuality education.¹⁰⁶ To address the needs of sexual minority students, OCPS has conducted focus groups with lesbian, gay, bisexual, transgender, and questioning (LGBTQ) high school students to inform future programming.¹⁰⁷

The School District of Palm Beach County

Among the program goals for its HIV/AIDS Prevention Program, the School District of Palm Beach County aims to “increase the number of youth in grades K–12 who receive HIV/AIDS prevention education.” To this end, the school district has worked to develop “age appropriate HIV/AIDS prevention education curricula and activities for students.” The district also designs and implements skills-based professional development trainings on HIV-prevention strategies for district administrators, educators, staff, and community partners.¹⁰⁸

Pinellas County Schools

Beginning in 1980, the Pinellas County school district developed its Family Life Education Council, which was tasked with creating a comprehensive family-life education curriculum for middle school. The curriculum was first piloted in schools in 1982 and included instruction on sex education, anatomy, “venereal disease,” and birth control. Parents had to provide permission for their child to receive the sex education component of the curriculum. Along with class instruction for students, the district provided parent education programs during the evenings. In addition, all teachers implementing the curriculum were required to receive 30 hours of staff development to teach sex education.

In 1984, the Family Life Education Committee replaced the Family Life Education Council. Its role was to approve outside presenters, train speakers, and review supplemental audiovisual materials for instruction. The committee still exists today and carries out the speaker-approval process for the district. Pinellas County teachers are still required to complete 30 hours of Family Life Education Training implemented by the school district in order to teach such instruction.¹⁰⁹

In Pinellas County schools, students receive age-appropriate human sexuality education beginning in fifth grade as an aspect of human growth and development instruction. In middle school (grades six through eight), and high school (grades nine through twelve), such instruction is provided in health class. The district uses a combination of locally developed lessons and supplemental instructional materials—including videos, booklets, and approved outside speakers—to provide the information. In fifth grade, human growth and development education addresses topics related to human sexuality, including the “male and female reproductive systems,” “bodily changes that occur during puberty,” and “AIDS awareness.” Middle school human sexuality education in sixth grade includes, among other topics, a discussion of the “emotional, social, and physical changes occurring during adolescence”; male and female reproductive systems, the stages of pregnancy and fetal development, the “causes, transmission, and prevention of AIDS”; and “the benefits of sexual abstinence.” Eighth grade instruction covers definitions of masculinity and femininity, “respectful sexual behavior,” “sexual abstinence,” “consequences of teenage pregnancy,” and “sexually transmitted diseases, including AIDS.” Instruction also includes a one-day lesson on “the effectiveness of condoms to reduce the risk of some STDs.”

Parents must provide permission for their child to participate in this lesson. In high school, human sexuality instruction addresses “social dating behavior,” “sexual attitude awareness,” “decisions regarding sexuality,” “the benefits of sexual abstinence for unmarried teens,” and contraception, among other topics.¹¹⁰

St. Lucie County School District

In 2005, spurred by the high rate of teen birth and HIV/AIDS incidence in St. Lucie County, concerned community members and stakeholders partnered to improve the sex education provided in district schools.¹¹¹

Members of the community, along with middle and high school principals of St. Lucie public schools, formed the HIV/AIDS Curriculum Task Force, which was tasked with recommending a sex education curriculum that was “scientifically proven to be effective in changing sexual behavior” for inclusion in the district’s health courses.¹¹²

The taskforce reviewed six potential curricula that all fell under the criterion of programs identified by the CDC as effective and were listed on the Florida Board of Education’s recommended curriculum list. After review, the taskforce selected two curricula for recommendation, which were then evaluated by health educators from each of the district’s high schools. These educators unanimously selected *Get Real About AIDS* and made the recommendation to the district school board for its implementation. *Get Real About AIDS* is a skills-based, HIV risk-reduction curriculum designed for students in grades nine through 12. This 15-session school-based program consists of experiential activities that serve to develop participants’ refusal and communication skills, as well as their skills in using condoms. The curriculum addresses practicing safer sexual behaviors, including delaying sexual activity, using condoms, being monogamous if sexually active, and avoiding risky situations.¹¹³ An evaluation of the program published in *Preventive Medicine* found that it increased knowledge of HIV and HIV prevention, reduced the number of sexual partners, and increased condom use among participants.¹¹⁴

Beginning in the 2008–2009 school year, age-appropriate components of the curriculum were incorporated into class instruction for grades four through twelve.¹¹⁵ Different lessons are incorporated into different class subject areas, including health, language arts, physical education, and science.¹¹⁶ The majority of the lessons are taught in middle and high school, where they are part of health education classes. District teachers are trained to implement the lessons and may seek assistance from district nurses or nurses employed by the county health department.

In high school, the curriculum includes a DVD on proper condom use, developed in partnership with the county health department. The video features a demonstration conducted and narrated by local physicians that presents the information in a “scientific, data-based, and non-emotional” manner.¹¹⁷ Textbooks and supplemental curricular materials are funded through district funds for education supplies.

In April 2010, St. Lucie County school district began an evaluation of the *Get Real About AIDS* curriculum implemented in district schools. A five-member curriculum evaluation committee, including a university researcher, an epidemiologist from the county health department, an assessment specialist and educator from the St. Lucie County school district, and an administrator from the Osceola County school district, developed the evaluation at the request and approval of the St. Lucie County School Board. The survey will assess students’ knowledge, attitudes, and behavior regarding HIV/AIDS. Approximately 2,000 eighth and 10th graders from St. Lucie County will participate in the evaluation and approximately 1,000 eighth and 10th graders from Osceola County school district will serve as a control group.¹¹⁸

Volusia County Public Schools

In April 2009, the Volusia County School Board voted to adopt a new “abstinence-plus” curriculum to be implemented to students beginning in the eighth grade. It maintains the emphasis on abstinence as the most effective means of preventing pregnancy and STDs but also includes information about reliable methods of birth control and disease prevention.¹¹⁹

We encourage you to submit any updated or additional information on comprehensive approaches to sex education being implemented in Florida public schools for inclusion in future publications of the State Profiles. Visit SIECUS’ “Contact Us” page (under the “About Us” section) at www.siecus.org to share information. Select “state policy” as the subject heading.
